Brief Description of Arguments to be Presented:

The Attorney for the Applicant requests a telephone interview to discuss proposed amendments to the claims as well as the cited prior art. The proposed amended claims are appended to this paper.

An interview was conducted on the above-identified application on _____.

NOTE: This form should be completed by applicant and submitted to the examiner in advance of the interview (see MPEP § 713.01).

This application will not be delayed from issue because of applicant's failure to submit a written record of this interview. Therefore, applicant is advised to file a statement of the substance of this interview (37 CFR 1.133(b)) as soon as possible.

This collection of information is required by 37 CFR 1.133. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 21 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Proposed Claims

1. (Currently amended): A computer-aided method to selectively display a pre-determined set of contents for a specific class of devices, the method comprising the steps of:

generating an image of a pre-determined rendition of the set of contents for a computer display;

identifying a section in the contents based on a preference of a user;

re-formatting the identified section to generate a new rendition including the identified section, wherein the new rendition is formatted based upon a characteristic of the specific class of devices and the preference of the user; and

such that the new rendition can be displayed on the specific class of devices wherein the number of columns is reduced in the new rendition.

2. (Previously presented): A computer-aided method as recited in claim 1 wherein the user is selected from the group of an end-user viewing the new rendition and the provider of the set of contents.

3. (Previously presented): A computer-aided apparatus to selectively display a pre-determined set of contents for a specific class of devices, the apparatus comprising:

an image generator configured to generate an image of a pre-determined rendition of the set of contents;

a section identifier configured to identify a section in the contents based on a preference of a user;

a section manipulator configured to re-format the identified section to generate a new rendition including the identified section, wherein the new rendition is formatted based upon a characteristic of the specific class of devices and the preference of the user; and

such that the new rendition can be displayed on the specific class of devices.

4. (Previously presented): A computer-aided apparatus as recited in claim 3 wherein the user is selected from the group of an end-user viewing the new rendition and the provider of the set of contents.

5. (Currently amended): A computer-aided method to selectively display a pre-determined set of contents for a specific class of devices, the method comprising the steps of:

generating an image of a pre-determined rendition of the set of contents for a computer display;

identifying a section in the contents based on a preference of a user;

re-formatting the identified section to generate a new rendition including the identified section, wherein not all of the contents are in the new rendition, wherein the new rendition is formatted based upon a characteristic of the specific class of devices and the preference of the user; and

such that the new rendition can be displayed on the specific class of devices, wherein the class of devices is the class of personal digital assistants wherein the number of columns is reduced in the new rendition.

6. (Previously presented): A computer-aided method as recited in claim 5 wherein the user is selected from the group of an end-user viewing the new rendition and the provider of the set of contents.

7. (Currently amended): A computer-aided apparatus to selectively display a pre-determined set of contents for a specific class of devices, the apparatus comprising:

an image generator configured to generate an image of a pre-determined rendition of the set of contents for a computer display;

a section identifier configured to identify a section in the contents based on a preference of a user;

a section manipulator configured to re-format the identified section to generate a new rendition including the identified section, wherein not all of the contents are in the

new rendition, wherein the new rendition is formatted based upon a characteristic of the specific class of devices and the preference of the user; and

such that the new rendition can be displayed on the specific class of devices, wherein the class of devices is the class of personal digital assistants wherein the number of columns is reduced in the new rendition.

8. (Previously presented): A computer-aided apparatus as recited in claim 7 wherein the user is selected from the group of an end-user viewing the new rendition and the provider of the set of contents.

9. (Currently amended): A computer-aided method to selectively display a pre-determined set of contents for a specific class of devices, the method comprising the steps of:

generating an image of a pre-determined rendition of the set of contents for a computer display;

identifying a section in the contents based on a preference of a user;

re-formatting the identified section to generate a new rendition including the identified section, wherein not all of the contents are in the new rendition, wherein the new rendition is formatted based upon a characteristic of the specific class of devices and the preference of the user; and

such that the new rendition can be displayed on the specific class of devices, wherein the class of devices is the class of phones wherein the number of columns is reduced in the new rendition.

10. (Previously presented): A computer-aided method as recited in claim 9 wherein the user is selected from the group of an end-user viewing the new rendition and the provider of the set of contents.

11. (Currently amended): A computer-aided apparatus to selectively display a pre-determined set of contents for a specific class of devices, the apparatus comprising:

an image generator configured to generate an image of a pre-determined rendition of the set of contents for a computer display;

a section identifier configured to identify a section in the contents based on a preference of a user;

a section manipulator configured to re-format the identified section to generate a new rendition including the identified section, wherein not all of the contents are in the new rendition, wherein the new rendition is formatted based upon a characteristic of the specific class of devices and the preference of the user; and

such that the new rendition can be displayed on the specific class of devices, wherein the class of devices is the class of phones wherein the number of columns is reduced in the new rendition.

12. (Previously presented): A computer-aided apparatus as recited in claim 11 wherein the user is selected from the group of an end-user viewing the new rendition and the provider of the set of contents.
